## EDUCATION

Honours Computer Science and Management (B.Sci), Wilfrid Laurier University

September 2022 - Dec 2026  
Waterloo, ON

## EXPERIENCE

### Applied AI Engineer (Contract)

April 2024 - Present

#### Self-Employed

Vaughan, ON

- Built and deployed an AI-driven WhatsApp summarization platform serving 200+ daily active users, processing large volumes of unstructured conversational data.
- Owned end-to-end NLP pipelines for ingestion, chunking, summarization, output validation, and failure handling.
- Reduced average response latency by ~30% through dynamic chunking, caching strategies, and context-window optimization.
- Performed structured error analysis on model outputs to identify hallucination patterns and guide iterative prompt and pipeline improvements.
- Implemented monitoring and logging to track inference failures, latency spikes, and output anomalies in production.

### AI Engineer (Applied Systems)

July 2025 - Present

#### MCG - Digital Assetization Company

Vaughan, ON

- Refactored and optimized AI pipelines for real-time avatar lip-sync, improving phoneme-to-blendshape alignment for audio- and text-driven animation.
- Integrated Whisper-based speech-to-text models into production workflows and benchmarked alternatives to balance accuracy and latency.
- Tuned inference parameters (batching, beam search, quantization) to reduce latency by ~25% without degrading output quality.
- Exposed AI capabilities as scalable REST APIs and partnered with frontend teams to integrate models into user-facing applications.
- Worked cross-functionally with product and frontend teams to align AI system behavior with user experience requirements.

### AI / ML Research Assistant (Applied Validation)

September 2025 - Present

#### Wilfrid Laurier University

Waterloo, ON

- Designed automated validation and stress-testing pipelines to evaluate algorithmic behavior across 1,000+ experimental runs.
- Analyzed large-scale experimental outputs to identify failure patterns and discrepancies between expected and observed system behavior.
- Produced reproducible reports summarizing empirical findings and corrective adjustments, emphasizing reliability over theoretical novelty.

## PROJECTS

### Reinforcement Learning Experimentation – N-Queens

- Implemented Q-learning and policy-gradient agents to solve N-Queens problems significantly faster than brute-force backtracking for  $N \leq 20$ .
- Applied reward shaping, action masking, and curriculum scaling to improve convergence stability.
- Conducted controlled experiments and ablation studies comparing tabular, linear, and neural policy approaches.

## CERTIFICATIONS

- AWS Certified Cloud Practitioner - In Progress

## SKILLS

|                         |                                                                                                    |
|-------------------------|----------------------------------------------------------------------------------------------------|
| AI & Machine Learning:  | PyTorch, TensorFlow, Hugging Face Transformers, scikit-learn, NumPy, SciPy                         |
| LLMs & NLP:             | Prompt engineering, summarization pipelines, evaluation & error analysis, hallucination mitigation |
| Speech & Multimodal AI: | Whisper (speech-to-text), audio-driven ML pipelines                                                |
| Deployment & Systems:   | REST APIs, Docker, serverless architectures, cloud inference, latency optimization                 |
| Languages & Tools:      | Python, JavaScript/TypeScript, Git, Linux/Unix                                                     |
