EDUCATION

Honours Computer Science and Management (B.Sci), Wilfrid Laurier University

September 2022 - April 2026
Waterloo, ON

EXPERIENCE

Software Engineer – AI Platform
Self-Employed

April 2024 - Present
Vaughan, ON

- Designed and deployed backend services and APIs to support AI-powered applications used by ~200 daily active users.
- Built platform components for ingesting, processing, and routing unstructured text data through AI pipelines.
- Implemented logging, error handling, and monitoring to ensure reliability and observability of AI-backed services in production.
- Optimized system performance through batching, caching, and request orchestration to reduce latency and cost.
- Owned end-to-end platform reliability, including deployment configuration, service-level monitoring, and production debugging.
- Diagnosed and resolved production failures related to malformed inputs, downstream API instability, and resource constraints.

Software Engineer – AI Systems
MCG - Digital Assetization Company

July 2025 - Present
Vaughan, ON

- Implemented backend services and orchestration logic to support real-time AI-driven avatar interactions.
- Integrated speech-to-text and language model pipelines into scalable REST APIs consumed by frontend applications.
- Partnered with product and frontend teams to define service contracts and ensure reliable end-to-end system behavior.
- Authored system and API documentation to support onboarding, maintenance, and future extensibility.
- Supported low-latency AI services operating under real-time constraints, balancing throughput, response time, and system stability.

Junior Software Engineer / Platform Developer
LaunchPath Inc.

June 2025 - August 2025
Vaughan, ON

- Built and maintained backend components for analytics-focused applications, including data ingestion and API layers.
- Translated architectural designs into production-ready services following Agile delivery practices.
- Supported deployment and integration across multiple environments, resolving issues related to configuration and data flow.

Software Engineering Research Assistant
Wilfrid Laurier University

September 2025 - Present
Waterloo, ON

- Developed automated testing and validation tools in Python to verify correctness and performance of complex software systems.
- Built reusable debugging and profiling utilities to support large-scale iterative testing and system optimization.
- Built automated testing and validation tooling in Python to verify correctness, performance, and regression behavior of complex software systems.

PROJECTS

TourSage - AI Tour Guide App

- Built backend services and APIs to support an AI-driven mobile application generating structured tour recommendations.
- Integrated third-party APIs and AI services into a cohesive platform with defined service boundaries and error handling.

wluNest - Student Housing Platform

- Built a full-stack web application for searching and comparing Waterloo rental listings.
- Implemented geospatial queries, real-time updates, and a clean UI that significantly improved usability for students.

SKILLS

Programming Languages	Python, JavaScript / TypeScript, Java, SQL
Backend & Platforms	Node.js, Express, REST APIs, service orchestration
Databases	PostgreSQL, MySQL, MongoDB
Infrastructure & Tools	Docker, AWS (Lambda, S3), Git, CI/CD, Vercel
Concepts	Backend system design, AI service integration, observability, performance optimization
