EDUCATION

Honours Computer Science and Management (B.Sci), Wilfrid Laurier University	September 2022 - April 2026	Waterloo, ON
---	-----------------------------	--------------

EXPERIENCE

Contract Full Stack Developer Self-Employed	April 2024 - Present	Vaughan, ON
- Engineered an AI-driven WhatsApp summarization service, integrating WhatsApp Web API with Google Gemini AI, condensing chat threads into concise daily digests for 200+ subscribers, achieving an 80% reduction in manual review time. - Architected and deployed a scheduled email system using Node.js and SendGrid with 99.9% uptime. - Built modular RESTful APIs and dynamic React/Next.js front ends for 5+ small-business clients, ensuring scalability, maintainability, and high performance. - Led client workshops to gather requirements, performed code reviews, and delivered end-to-end solutions on schedule, driving repeat engagements.		
Full Stack Developer MCG - Digital Assetization Company	July 2025 - Present	Vaughan, ON
- Refactor a Python/JavaScript lip-sync pipeline for 3D avatars in Unity, improving phoneme-to-blend-shape alignment and enabling both audio- and text-driven animation triggers. - Prototype end-to-end AI workflows: build Whisper-based speech-to-text and LangChain orchestration, benchmark alternatives, and recommend the best accuracy/latency configuration. - Expose lip-sync and AI capabilities as RESTful services and integrate with a React/Next.js front end to drive real-time avatar animations in the browser.		
Junior Solution Architect and Developer LaunchPath Inc.	June 2025 - August 2025	Vaughan, ON
- Spearheaded the end-to-end solution architecture for LaunchPath’s Aptamer Therapeutics project, translating business requirements into scalable C4 diagrams and detailed technical specifications. - Orchestrated three Agile sprints (2 weeks each), defining epics, features, and user stories in Jira and Confluence, and delivering design wireframes, architecture plans, and sprint demos on schedule. - Developed and refined a responsive React Native front end (built from Figma wireframes) with secure integration to Python microservices for real-time biosensor data ingestion.		
Website Developer (UI/UX) Futures and Fringes	February 2025 - March 2025	Vaughan, ON
- Designed and launched a CMS-powered website in Framer, improving mobile load times by 25% and boosting user engagement by 15%. - Integrated interactive features (scroll-triggered animations, newsletter sign-ups, case study showcases) raised subscriptions by 20%. - Collaborated in a 4-week Agile sprint with designers and stakeholders to deliver a modern, responsive web presence aligned with brand vision.		

PROJECTS

- TourSage – AI Tour Guide (React Native/Expo, Node/TypeScript):		
Built a cross-platform mobile app that serves dynamic, GPS-aware tours. Implemented Tour (planned routes by transport type—walk/bike/car/transit—with duration presets and round-trip toggle) and Explore modes (category filters, search, ratings, distances) on an interactive map with real-time tracking. Developed a typed REST API that generates itineraries with Gemini AI, enriches stops with Google Places data and weather, and returns structured routes (titles, descriptions, stop lists, and time budgets). Designed clean, modular components (Map component, LocationService) and documented setup for seamless handoff.		
- wluNest - Student Housing Application (React/Node.js/MySQL):		
Developed a platform aggregating Waterloo-Kitchener rental listings for students. Designed an intuitive UI with interactive maps, personalized filters, and a roommate finder. Integrated real-time updates and direct listing links using Node.js, React, and MySQL. Delivered a polished, fully functional app that significantly streamlined the housing search process.		
- Battleships Game (Java/Maven):		
Developed a fully functional recreation of the classic “Battleships” game using Java and Maven, including an intuitive GUI and an AI opponent. Demonstrated problem-solving and coding proficiency with object-oriented principles, AI development, and algorithmic problem-solving.		
- Waiver Submission Applications (React/Prisma/Tailwind CSS):		
Designed and implemented applications using React.js, Prisma, Tailwind CSS, and Vercel to manage liability waivers with a robust online database, reducing admin time by 40%. Strengthened knowledge in front-end frameworks, databases, and API integration.		

SKILLS

Programming Languages	Python, Java, JavaScript, C/C++, Lua, TypeScript, Dart, HTML, CSS, SQL, R, Bash
Technologies & Tools	Git, Microsoft Office, React, React Native, Next.js, Flutter, VS, Apache Maven, Prisma, Tailwind, WireShark, MySQL, MongoDB, PostgreSQL, Figma, Framer, Node.js , Electron, Babylon.js , Flask, Unix, TensorFlow, Expo
Cloud & DevOps	AWS Lambda/S3, Docker, CI/CD, Vercel, Railway, Render
Concepts	Full-stack web development, mobile app development, object-oriented programming, RESTful APIs, UI/UX design, game development, responsive Design
Languages	English (Native)
